

**City of Minneapolis
Department of Public Works**

MEMORANDUM

To: Jerry LePage
CPED

Date: 6/17/04

From: Bob Morgan
Public Works Dept. Project Manager

Subject: Bedrock Elevation Information at Nicollet Hotel Site

Questions were raised about the bedrock elevation at this location in the 2003 RFP process.

The Public Works Department has some information from our sewer plats. Other information may be available from the Library construction immediately south of this site.

This information was not developed for the purpose of constructing multi-story buildings. However, since it is public information, we are making it available to potential proposers for their general information.

See attached file.

c: Steve Kotke

The following info was obtained from the sewer plats:

Top of Sandstone	Ground	Top of Limestone	Top of Soapstone
3rd St. and Nicollet ~791.6	~839.3	~810.1	~797.0
3rd St. and Hennepin ~803.8	~840.3	~814.6	~807.8
Washington and Nicollet ~791.6	~840.3	~814.3	~798.3
Washington and Hennepin ~804.3	~840.8	~815.8	~808.3

This seems to back up Bob's information that put the bedrock at about 815. Please let me know if you would like copies of these plats that contain detailed profiles of the subsurface strata.
